Are You Set Up to Support Remote Workers?

EN POINTE IT SOLUTIONS

Get up and running with cloud VDI with a Windows Virtual Desktop JumpStart from En Pointe.

It's time to take a more efficient and secure approach to virtualization.

Your infrastructure needs to accommodate an increasingly remote workforce, giving employees a consistent and quality user experience without creating extra complexity for IT teams. Microsoft's Windows® Virtual Desktop is a comprehensive desktop and application virtualization service in the cloud that gives you flexibility, scalability and security for your Virtual Desktop Infrastructure (VDI) environment.

Learn how to take advantage of Windows Virtual Desktop, as the only VDI that provides multi-session Windows 10, optimizations for Office 365® ProPlus and simplified management. A Windows Virtual Desktop JumpStart from En Pointe IT Solutions will help you quickly and securely deploy a VDI environment that's suited to your business needs.

What is a JumpStart?

A JumpStart is an on-site, expert-led workshops that combine training and implementation. Centered around best practices for cloud and security, JumpStarts familiarize your team with new technology and provide you with a working environment you can begin using right away.

How does the JumpStart work?

1. Our Microsoft technical experts show you the features and functionality of Windows Virtual Desktop, focusing on how to deploy, implement and operationalize the solution.
2. Through whiteboarding sessions, we design your implementation based on current and future requirements as well as security best practices.
3. We build a secure Windows Virtual Desktop environment for you by:
   a. Creating a "golden" image template with Microsoft 365™ and up to three additional applications
   b. Establishing identity and collaboration frameworks via configuration of Azure® Active Directory® and file share services
   c. Deploying a Windows 10 host pool for multi-session or persistent Windows 10 desktops

The result

Your team will leave the JumpStart with a solid understanding of Windows Virtual Desktop and a secure environment that is ready to scale.
